Overview

The Adtran 834-v6 dual-band Wi-Fi 6 Service Delivery Gateway (SDG) provides multi-gigabit wireless throughput, enabling more users and devices to connect and stream simultaneously. The Adtran 834-v6 delivers never-before-seen wireless speeds and whole-home coverage, even in periods of heavy network use.

The Solution

The Adtran 834-v6 is designed for service providers that require carrier-class performance, reliability, and firmware flexibility in a broadband access gateway. Native support for IPv6, multicast traffic handling for IPTV, dynamic Quality of Service (QoS), and TR-069 remote management are standard features. The Adtran 834-v6 offers out-of-the-box OpenSync™ integration, providing a platform for new revenue-generating services.

The OFDMA Advantage

OFDMA can significantly reduce contention and preamble overhead, especially for the short packets prevalent in many networks. Both OFDMA and multiuser MIMO are used to parallelize control traffic wherever possible.

The SDG 834-v6 delivers a highly efficient Wi-Fi 6 network with low latency and jitter that improves overall QoS.

Speed to Burn and Room to Grow

The Adtran 834-v6 boasts a dual-core ARM® Cortex-A53 1.35GHz processor with the power to route IPv4/v6 traffic at 1Gbps bi-directionally, with plenty of processing power remaining for value-added applications, such as HomePass by Plume®. This gives service providers unlimited feature, price, and service delivery options.

A Better Look for Better Performance

The device location within the home is the most important indicator of Wi-Fi performance. Getting the best signal means not placing it in a corner, closet, or on a shelving unit behind a glass picture frame. Adtran gateways and access points offer an elegant, modern design supported by multiple mounting options, enabling them to blend into a home's décor.
